

Abstract of the Disclosure

A motor vehicle roof which can be lowered into a rear receiving space, with a rear roof part (8) which is pivotally supported on the body and a front roof part (6) which is pivotally supported thereon. The rear roof part (8) has a lengthwise dimension which is equal essentially to twice the lengthwise dimension of the rear window (22). The rear window can be moved out of a position which closes a rear window cutout to under the closed front section of the rear roof part.
